S.O.L.A.C.E.
Supporting Older Low-SES Adults and their Caregivers Electronically

Over **40 million** older adults (65+ years) reside in the US.

Rural older adults are more likely to live alone after the age of 75, **report worse health status**, have more limitations on physical functioning, and have lower incomes.

Our goal is to **wield technology to enable low-SES, urban, and rural-dwelling older adults to “age in place.”**

**Current Technologies**

- Presence Clock
- Check-In Tree
- Community Window
